

BRAND REFERENCE · VERSION 1.0

Classfully brand guidelines

A practical system for product, classroom, media, and partner communications.

THE IDEA

Classfully makes individual student signals visible as a shared classroom response. The brand should feel intelligent, alive, calm, and unmistakably built for university teaching.

Use this document with the files in the Classfully media kit. When a placement has its own size or crop rules, begin with the closest supplied master and preserve the safe area.

01 · BRAND FOUNDATION

The interactive layer for university courses

Classfully works alongside an instructor's existing slides and lesson materials. It helps instructors invite participation at the right moment, understand the room, and build a useful record of student progress over time.

Positioning

PRIMARY LINE

Make the classroom interactive. Build every student's journey.

Brand promise

Every student gets a clear way to participate. Every instructor gets a clearer view of the room. Every class session becomes part of a coherent course record.

Personality

- **Intelligent, not academic-sounding.** Use clear ideas and evidence without institutional jargon.
- **Playful, not childish.** Create anticipation and tactile delight that still feels right for adults.
- **Alive, not busy.** Movement should reveal participation, progress, or change.
- **Warm, not casual.** Sound human and encouraging without becoming cute or overfamiliar.
- **Confident, not grandiose.** Explain what the product helps people do. Avoid inflated claims.

Audience

The primary buyer and operator is a university instructor. The most frequent participant is a student using a phone. Department leaders and teaching teams are secondary audiences. Every brand decision should respect both the teaching environment and the student's limited attention.

02 · IDENTITY

Logo and mark

Classfully.

The overlapping conversation shapes and check form represent contribution becoming visible. The coral point is a live arrival signal. The period in the wordmark gives the name a confident, editorial finish.

Use the right version

Color lockup	Default for warm paper and white backgrounds.
Reversed lockup	Use only on deep navy or an equally quiet dark surface.
Standalone mark	Use for avatars, app icons, small navigation surfaces, and constrained squares.
Wordmark	Keep the mark with the name in first-use and external brand contexts.

Clear space and minimum size

- Leave at least one mark-height of clear space around the complete lockup.
- Do not render the complete lockup below 120 px wide on screen. Use the standalone mark when space is tighter.
- For print, keep the complete lockup at least 32 mm wide and the standalone mark at least 8 mm wide.

Never

- Stretch, skew, rotate, or redraw the mark.
- Change individual logo colors or remove the coral signal point.
- Add bevels, drop shadows, outlines, or animation to the external logo.
- Place the logo over a busy part of the ripple field.
- Use an AI-generated approximation of the logo or wordmark.

03 · VISUAL SYSTEM

Color

Classfully is primarily warm paper, deep navy, and violet. Coral is a signal, not a second primary color. Supporting colors should identify meaning in a data display rather than decorate a screen.

FFFEFA	Warm paper	Primary canvas and calm negative space
101A38	Deep navy	Primary text, dark surfaces, and strong actions
5146E5	Classfully violet	Brand action, live interaction, and participation
DF664E	Arrival coral	One meaningful arrival, emphasis, or alert
697087	Muted slate	Secondary text and explanatory labels
D9D4FF	Soft lilac	Quiet selection or participation background
3AA45A	Success green	Connected, complete, or confirmed states

Color hierarchy

1. Begin with warm paper and deep navy so the classroom surface stays readable.
2. Use violet for the current activity, selected state, or response field.
3. Introduce coral only when it points to a meaningful moment.
4. Use semantic colors consistently. Do not use color as the only carrier of meaning.

AVOID GRADIENT SLOP

Do not use broad decorative gradients, glowing blobs, or arbitrary color washes. Depth should come from spacing, restrained shadows, tangible button layers, and the response field itself.

04 • TYPOGRAPHY

Editorial clarity meets usable interface type

Classfully pairs Fraunces with Inter. The display face gives important classroom moments a human, editorial voice. The interface face keeps controls, data, and instructions fast to read.

Display	Fraunces	Large questions, key insights, section titles, and major numbers
Interface	Inter	Navigation, buttons, labels, instructional copy, and data
Portable fallback	Georgia + Arial	Media exports and documents where product fonts cannot travel

Type roles

- **Display headings:** sentence case, generous line height, and a maximum of roughly 10 to 12 words when projected.
- **UI labels:** concise and concrete. Prefer “Start class” over “Initialize session.”
- **Eyebrows:** short uppercase labels with restrained tracking, used for category and status.
- **Numbers:** use tabular figures for live counts, scores, timers, and join codes.
- **Emphasis:** prefer hierarchy, weight, and spacing. Do not rely on excessive bold, all caps, or colored text.

PROJECTION CHECK

If an instructor or student has to reread a projected question, the type is too small, too dense, or too decorative.

05 · SIGNATURE VISUAL LANGUAGE

The response ripple

Individual points arrive, gather, and shape a shared surface. This is the visual expression of Classfully: a room becoming legible without reducing students to a spreadsheet.

Meaning before decoration

- A point represents a response, contribution, learning moment, or arrival.
- A path represents movement from an individual device into the classroom signal.
- A ripple represents collective effect, accumulation, or progress over time.
- A coral point marks one meaningful arrival or focal moment. It should remain rare.

When to use it

Use the response field in presentation transitions, post-response confirmation, student progress, launch artwork, product listings, and calm waiting states. Do not use it behind dense forms, detailed tables, long policy copy, or every card in the interface.

Imagery principles

- Prefer real product views, real classroom context, and abstract response imagery over generic stock photography.
- Keep people and devices honest. Do not fabricate product capabilities in promotional mockups.
- Use warm, natural light and real texture. Avoid glossy 3D blobs, neon effects, confetti, and cartoon classroom imagery.

06 · MOTION AND INTERACTION

Motion should help the room feel something happen

Classfully motion connects an action on a student's phone with a visible change in the classroom. It should acknowledge, transport, settle, and reveal. It should never delay the instructor or obscure the data.

Core motion sequence

5. Acknowledge. The selected control compresses or responds immediately.
6. Transport. A signal appears to leave the student's action and move into the shared system.
7. Settle. The incoming point lands into the relevant category, cluster, or trend.
8. Reveal. Counts, labels, or aggregate understanding update after the motion makes the change understandable.

Timing

- Micro feedback: about 120 to 220 ms.
- Response transport: about 650 to 1,200 ms, paced by actual incoming responses.
- View transition: about 280 to 450 ms.
- Ambient waiting motion: slow, low-amplitude, and never the only sign of state.

Motion rules

- Responses should arrive at the pace students submit them. Do not create a theatrical queue that disconnects the visualization from the room.
- Use spring and settle behavior for tactile controls, but keep labels stable and readable.
- Respect reduced-motion preferences with an immediate state change and restrained fade.
- Do not promise phone haptics where the browser cannot reliably provide them. Visual feedback must stand on its own.

PURPOSE TEST

If removing an animation does not reduce understanding, reassurance, anticipation, or delight at a meaningful moment, the animation probably does not belong.

07 • PRODUCT INTERFACE

Different surfaces, one system

Classfully has three live surfaces with different jobs. Consistency comes from shared type, color, controls, and motion. Density should change according to the audience and viewing distance.

Surface	Primary job	Design priority
Instructor console	Control the current moment and see what needs attention	Now, next, questions, and safe recovery actions
Classroom display	Make the prompt and collective response legible across the room	Large type, low clutter, stable data, and visible join access
Student phone	Respond quickly and understand what happens next	Thumb reach, tactile controls, privacy clarity, and resilient connection

Components

- **Buttons:** keep the tactile layered effect for meaningful student actions. Do not add a competing pointer-focus ring. Preserve a clear keyboard focus state.
- **Cards:** use borders and spacing before shadow, tint, or gradient. A card should group related information, not decorate empty space.
- **Status:** say what is true and useful. “Responses are open” is better than a vague “Live.”
- **Empty states:** explain what will appear and what action starts it. Never flash fictional classroom data while real data loads.
- **Errors:** explain what happened, whether work is safe, and what the person can do next. Recover automatically where possible.

Visual restraint

Use one dominant focal action per moment. Hide or group secondary controls. Avoid stacking borders, shadows, tints, gradients, badges, and animated texture on the same component.

Natural language for a real classroom

Classfully copy should sound like a thoughtful instructor or teaching assistant: direct, calm, friendly, and specific. It should not sound like enterprise software or synthetic marketing copy.

Writing principles

- **Say what happens.** “Post question” instead of “Submit engagement.”
- **Use classroom language.** Class, session, activity, question, response, participation, progress, and instructor.
- **Keep instructions short.** One action per sentence whenever possible.
- **Respect student agency.** Explain privacy, anonymity, scoring, and what the projector shows.
- **Write calm errors.** Avoid blame and give a recovery path.

Anti-slop rules

- Do not use em dashes. Use a period, comma, colon, or parentheses when needed.
- Avoid “seamless,” “unlock,” “empower,” “revolutionize,” “ecosystem,” “journey” as filler, and other generic product language.
- Do not use rhetorical fragments simply to sound dramatic.
- Do not overuse paired constructions such as “not just X, but Y.”
- Do not repeat the same benefit in a headline, subhead, and button.
- Avoid emojis in core product copy. Icons already carry visual tone.

Examples

Prefer	Avoid
Start class	Launch your live learning experience
While the room responds	Awaiting participant engagement
Your response is in	Submission successfully processed
Ask without interrupting	Unlock seamless classroom dialogue

09 · ACCESSIBILITY AND QUALITY

Designed for the room, not the ideal device

Classfully must work for a student on an older phone, an instructor under time pressure, and a projector viewed from the back of a large classroom. Accessibility is part of the brand promise because participation only works when people can actually participate.

Minimum expectations

- Meet WCAG AA contrast for interface text and essential controls.
- Never communicate correctness, urgency, or selection through color alone.
- Keep touch targets at least 44 × 44 CSS pixels and leave enough space between adjacent actions.
- Provide a visible keyboard focus state without showing pointer focus rings after taps.
- Support text enlargement and narrow mobile screens without clipping actions or footer content.
- Provide reduced-motion behavior that preserves clear acknowledgment and state change.
- Use plain language for privacy, scoring, attendance, and anonymous questions.
- Keep projector copy large, short, and high contrast. Test from realistic viewing distance.

Final review checklist

- ☐ Does this feel appropriate for university students and instructors?
- ☐ Is the most important action obvious within three seconds?
- ☐ Does every color, layer, shadow, and animation have a job?
- ☐ Are real states shown instead of placeholder classroom data?
- ☐ Can the interface recover without asking a room of students to refresh?
- ☐ Does the copy sound natural when read aloud by an instructor?
- ☐ Have we avoided em dashes, inflated language, decorative gradients, and generic AI styling?
- ☐ Does the result remain clear with motion reduced and color perception limited?

THE STANDARD

The product should feel special because it makes classroom participation tangible, not because every surface is embellished.

10 · ASSET REFERENCE

Start with the media kit

Use the supplied assets before recreating a logo, banner, icon, or response field. SVG logo files are the master for print and resizing. PNG exports are prepared for common digital placements.

Use	File	Size
Primary logo	logos/classfully-lockup-color.svg	Vector
Profile image	logos/classfully-profile-400.png	400 × 400
App icon	logos/classfully-app-icon-1024.png	1024 × 1024
Universal banner	banners/classfully-master-16x9-3840x2160.png	3840 × 2160
LinkedIn cover	banners/classfully-linkedin-cover-4200x700.png	4200 × 700
X header	banners/classfully-x-header-1500x500.png	1500 × 500
YouTube art	banners/classfully-youtube-channel-2560x1440.png	2560 × 1440
Link preview	social/classfully-open-graph-1200x630.png	1200 × 630
Square social	social/classfully-square-2160x2160.png	2160 × 2160
Portrait social	social/classfully-portrait-2160x2700.png	2160 × 2700
Vertical story	social/classfully-story-2160x3840.png	2160 × 3840
Play feature	store/classfully-google-play-feature-1024x500.png	1024 × 500
